Open OnDemand, Open XDMoD, and ColdFront: An HPC center management toolset

Tutorial presented at PEARC22 by staff from:
Ohio Supercomputer Center
UB Center for Computational Research
Virginia Tech Advanced Research Computing

Ohio Supercomputer Center

An OH·TECH Consortium Member

**VIRGINIA
TECH™**

University at Buffalo

Center for Computational Research

Tutorial Staff:

Andrew Bruno, UB

Gerald Byrket, OSC

Alan Chalker, OSC

Andrew Collins, OSC

Robert DeLeon, UB

Trey Dockendorf, OSC

David Hudak, OSC

Matt Jones, UB

Jeff Ohrstrom, OSC

Ryan Rathsam, UB

Travis Ravert, OSC

Dori Sajdak, UB

Bob Settlage, VT

Joseph White, UB

Agenda

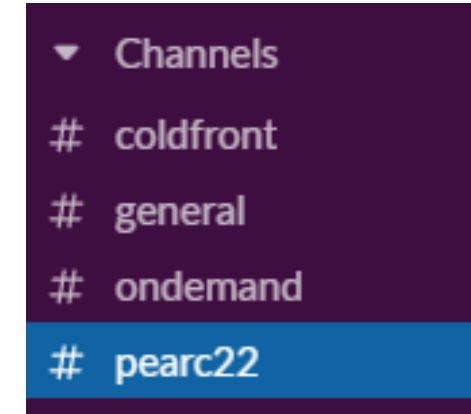

- Getting Started & Tutorial Goals
- Brief intro on all three products
- Tutorial technology
- Part 1: ColdFront
- Break: 10-10:30am
- Part 2: Open XDMoD
- Lunch Break – 12-1:30pm
- Part 3: Open OnDemand
- Break: 3-3:30pm
- Part 4: Open OnDemand interactive app configuration
- Part 5: Dynamic Batch Connect Fields
- Post Workshop – breakout sessions & slack channel

Getting Started

- Join the Slack organization for the tutorial
<https://tinyurl.com/pearc-slack>
- Clone the tutorial repo and follow instructions for starting containers
<https://github.com/ubccr/hpc-toolset-tutorial>
- What to do if you're having a technical problem – Slack us or raise your hand & we'll do our best to help out

Tutorial Goals:

- Provide participants with an overview of each product & how they are installed/configured
- Point out a few “gotcha!”s to look out for
- Give participants a cluster in a container to practice using these products
- Supply participants access to the developers of these products as a resource for questions & help
- Show off the new features that allow the products to work together

ColdFront – Managing Access

- Used as the source of record in a HPC center to ensure security & continuity of the systems
- Provides center staff ability to manage center resources & who has access to them
- Portal for users to manage their access to center resources & report on their research
- Plug-ins for job scheduler, central authentication, job statistics (XDMoD), OnDemand, that enable automation of access to or removal from resources
- Reports for center management to demonstrate the center's impact (publications, grants, research output)

Open OnDemand – Easy Access

- Web-based portal for accessing HPC services that removes the complexities of HPC system environments from the end-user

Includes:

- Files app for upload/download & editing of files
- Terminal app (no need for separate SSH client)
- Job app to create/edit/submit/monitor jobs
- Interactive apps to run GUI applications. Users can create and share apps. Centers can publish apps for all users

Open XDMoD – Usage & Performance Metrics

- Tool that aggregates job data & system performance metrics to inform system users, system staff & center decision makers
- Web portal providing job & system metrics, including utilization, quality of service metrics designed to proactively identify underperforming system hardware and software, and job level performance data for every job
- Role-based access to data with different levels of granularity, including job, user, or on a system-wide basis
- Ingest OnDemand logs into new OnDemand realm in XDMoD

Tutorial Container Architecture

Requirements: <https://github.com/ubccr/hpc-toolset-tutorial/edit/master/docs/requirements.md>

Clone the Github Repo:

```
git clone https://github.com/ubccr/hpc-toolset-tutorial
cd hpc-toolset-tutorial
./hpcts start
```

* The first time you do this, you'll be download ~20GB worth of containers from Docker Hub. This can take a long time depending on your network speeds. After downloaded, the containers are started and services launched.

WARNING!!! DO NOT run these containers on production systems. This project is for educational purposes only. The container images we publish for the tutorial are configured with hard coded insecure passwords and should be run locally in development for testing and learning only.

Tutorial Walk Through

<https://github.com/ubccr/hpc-toolset-tutorial>

Keep the applications page open for easy access to account usernames/passwords and portal URLs:

<https://github.com/ubccr/hpc-toolset-tutorial/blob/master/docs/applications.md>

OpenSource HPC resource **allocation** **portal** for **users, system admins, & center staff**

Tutorial presented at PEARC22 by:
Andrew Bruno, UB
Dori Sajdak, UB

Ohio Supercomputer Center
An OH·TECH Consortium Member

**VIRGINIA
TECH™**

University at Buffalo

Center for Computational Research

Automate access to your HPC resources

Manage access to all your resources in one place

Users

Databases

ACLs

Servers &
Clusters

Cloud

System
Administrators

Policies

Software
Licenses

Storage

Scientific Instruments

Why We Developed ColdFront:

- System Administrators wanted:
 - More automation, less manual error
 - One location for access management of all resources
 - Allow PIs to self-service access to resources
- Center Director wanted:
 - To require PIs to update project info annually
 - Consistent reporting of publication & grant info
 - Easy displays of usage for annual reporting

Resources

- Resources are anything you want to control access to and/or monitor usage of
- Resources might include:
 - clusters, storage platforms, cloud, servers, scientific instruments, databases, software licenses
- Resources have attributes
 - Some might enforce limits:
 - storage (GB),
 - software (seats),
 - cloud (subscriptions)
 - Some might restrict access & may tie to plugins:
 - Is the resource private or public? Available only to certain users/groups?
 - Cluster config options – Slurm plugin
 - System access restricted by UNIX group? - FreeIPA plugin
 - Warranty expiration dates
- These attributes are customizable
- The attributes set on resources are inherited by allocations

Allocations

- Determines what resource an account has access to
- Allocations have start & end dates, creation & last modified dates, status, description, associated resource(s) & require a justification
- Allocations have attributes like resources that may set limits, restrict access, and/or tie into the ColdFront plugins. Examples include:
 - CPU/core hours
 - Scheduler account name
 - UNIX group
 - Storage quota
- Like Resource attributes, these are customizable
- Users emailed when expiration dates approach – configurable time spans
- Resource access can be removed when an allocation expires using ColdFront plugins
- Allocation Change requests 

Projects

- Project = users, allocations for resources, reportable data (publications, grants)
- PIs (group leads) can request allocations for resources, add/remove users on their project & allocations, upload research info, complete annual project review, view group usage
- Role based logins allow for:
 - full project access for PIs
 - additional capabilities for managers assigned by PIs,
 - read-only views for users,
 - HPC center staff have access to tools for:
 - Allocation review, approval, & configuration
 - Annual project review approval
 - Other policy-driven tools

Allocation Requests & Change Requests Can be Viewed by System Administrators

Allocation Requests

For each allocation request below, there is the option to activate the allocation request and to view the allocation's detail page.

By default, activating an allocation will make it active for 365 days.

#	Requested	Project Title	PI	Resource	Project Review Status	Status	Actions
2449	Apr. 28, 2022	Computational and Data Science and Engineering	Eric Walker (ericwalk)	UB VPN Access (Software License)	<input checked="" type="checkbox"/>	Approved	Approve Details
2438	Apr. 21, 2022	Sunstar	Patricia Diaz (pidiazmo)	UB VPN Access (Software License)	<input checked="" type="checkbox"/>	New	Approve Details

Allocation Change Requests

For each allocation change request below, there is the option to activate the allocation request and to view the allocation change's detail page. If a change request is only for an extension to the allocation, they can be approved on this page. However if the change request includes changes to the allocation's attributes, the request must be reviewed and acted upon in its detail page.

#	Requested	Project Title	PI	Resource	Extension	Actions
3	Apr. 06, 2022	Evolution of genomes with a focus on structural v...	Omer Gokcumen (omergokc)	ProjectStorage (Storage)		Approve Details
7	May. 02, 2022	Nonadiabatic dynamics in solar energy materials: ...	Alexey Akimov (alexeyak)	ProjectStorage (Storage)	30 days	Approve Details

Annual Project Reviews

You cannot request a new allocation because you have to review your project first.

You need to review this project. [Review Project](#)

Test Project

[Manage Project](#)

Reviewing Project: Test Project

CCR requires faculty to review their project information annually in order to renew their group's accounts. The information provided by researchers is compiled and used to help make the case to the University for continued investment in CCR. Up-to-date and accurate information is crucial to our success. [Questions?](#) [Contact us](#)

Please update the following information:

- [Verify](#) your project description is accurate
- [Add Publications](#)
- [Add Grants](#)
- [Verify](#) the user accounts in your group and remove any that should no longer have access to CCR resources

Grants Last Updated:	Sep. 11, 2018
Publications Last Updated:	Sep. 11, 2018
Users in project:	Dori Sajdak

Reason for not updating project information*

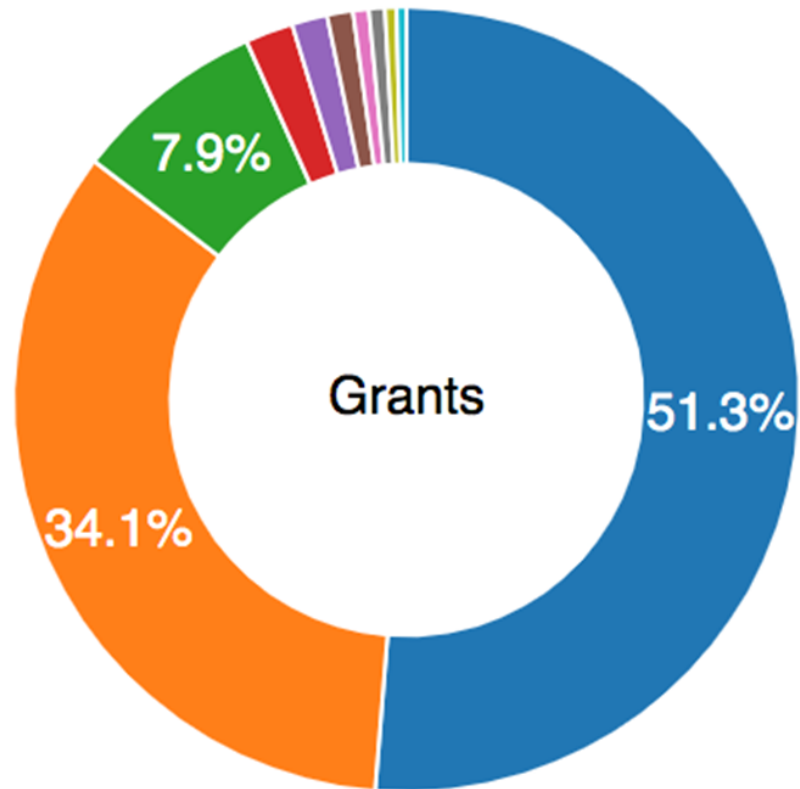

If you have no new information to provide, you are required to provide a statement explaining this in this box. Thank you!

Completed Annual Project Reviews Can be Viewed by Center Director and System Admins

Pending Project Reviews

Project Title	Date Review Submitted	PI	Grants Last Updated	Publications Last Updated	Reason for not Updating Project	Project Review Actions
My Test Project	May. 13, 2021	Dori Sajdak (djm29)	May. 13, 2021	May. 13, 2021		Mark Complete Email

■ National Institutes of Health (NIH): \$78,599,277 (33)
■ National Science Foundation (NSF): \$52,283,068 (73)
■ Other: \$12,161,778 (49)

Center Directors are able to better demonstrate the center's impact

Report on resources & allocations

Collect publication information

Collect grant information

Extensible plug-in architecture allows for **integration of nearly anything!**

Vendor APIs

Integrations

Plug-ins (Django Apps)

- [OnDemand](#)
- [XDMoD](#)
- [Slurm](#)
- [Mokey/Hydra OpenID Connect](#) (Identity Management)
- [FreeIPA](#) (LDAP/AD)
- [Other plug-in examples](#)
- Other 3rd party APIs should be added as a new plug-in (Django app)

Community Plugins:

[OpenStack](#)

[Keycloak User Search](#)

[Starfish](#)

Tutorial Steps:

- Create different user roles and access
- Create new cluster resource
- As PI user, create project and request allocation for cluster resource
- As sys admin user, activate allocation and sync with Slurm
- As PI user, run batch & OnDemand job
- As PI users, request allocation change & allocation renewal
- Configure user with center director access & check out Project Review process
- Enable OnDemand integration

Production Deployments

Open OnDemand 2.0 Project Overview

Previous three year NSF SI2 award (#1534949) to develop OnDemand 1.x

Awarded follow on NSF CSSI award (#1835725) to develop OnDemand 2.x

Project runs from Jan 2019 to Dec 2023

Collaborators include SUNY Buffalo and Virginia Tech

Four areas

Visibility: Enhancing resource utilization visibility by integrating the existing Open XDMoD platform

Scalability: support more types of computing resources and software

Accessibility: appeal to more scientists in more fields of science

Engagement: establish community of departmental, campus and national HPC users and administrators

Check out the Project on GitHub

See all the projects at: <https://github.com/OSC/ondemand/projects>

Large features currently stated for release: <https://github.com/OSC/ondemand/projects/10>

Feel free to comment or react to tickets. Open feature requests or anything. We want to hear from you!

WE WANT YOU!

If you have an idea or want to work on any of the features or bug fixes, please feel free to reach out to us and we will get you started. We always want to include our community in the Open OnDemand efforts.

Customizing the OnDemand Dashboard

Gerald Byrket - OSC

Hands on Tutorial: Dashboard in Development Mode

It Covers:

- Setting up the dashboard in development mode
- Changing the navigation bar color
- Pinning Apps to the dashboard
- Changing the layout of the dashboard
- Adding custom widgets to the dashboard

Dashboard Tutorial: Pinning Apps to the dashboard

- Pinning Apps and then grouping them

Future plans

1. Completed Jobs App
2. Server side integration to address Single Sign On problems by moving communication to the server
3. Provide OnDemand usage metrics through XDMoD

The screenshot shows a web browser window with the URL `ondemand-test.osc.edu/pun/dev/completedjobs`. The page title is "Completed Jobs". Below the title, there is a "Show 50 entries" dropdown and a "Filter:" input field. The main content is a table with the following columns: ID, Job Name, Start Time, Time Used, Cluster, and CPU Graph. The table contains six rows of job data, each with a small CPU graph icon in the CPU Graph column.

ID	Job Name	Start Time	Time Used	Cluster	CPU Graph
931595 - XDMoD	STDIN	Nov 4, 2019 2:43:37 pm	00:00:01	Pitzer	
8366776 - XDMoD	ondemand/sys/myjobs/basic_blast	Nov 4, 2019 12:29:00 pm	00:30:31	Owens	
8366777 - XDMoD	ondemand/sys/myjobs/basic_lammps_parallel	Nov 4, 2019 12:30:28 pm	00:02:07	Owens	
8357609 - XDMoD	ondemand/sys/dashboard/sys/bc_osc_rstudio_server	Nov 1, 2019 5:01:16 pm	01:00:07	Owens	
8357574 - XDMoD	ondemand/sys/dashboard/dev/matlab	Nov 1, 2019 4:40:09 pm	01:00:25	Owens	
8357572 - XDMoD	ondemand/sys/dashboard/dev/matlab	Nov 1, 2019 4:38:38 pm	00:01:01	Owens	

Find more ways to help users optimize their jobs!
