# Connecting Computing Power With Powerful Minds

Open OnDemand is an easy-to-use web portal that lets students, researchers, and industry professionals compute from anywhere. By eliminating the need for client software or command-line interface, Open OnDemand empowers users of all skill levels and significantly speeds up the time to their first computing job.

Benefits for users

Instead of going to the lab or installing client software, users can access supercomputers through the web. They can compute from anywhere, on any device, regardless of skill level.

Benefits for admins

Admins can expand supercomputer usage throughout their organization. By providing remote web access, they can optimize resources and better serve students, researchers, clients, and colleagues.
